## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, the claims are incomplete and missing structure for changing the volume.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Welker (US Patent 5,578,770).

Welker teaches a fitting (54,62,66 and 68) having an input to receive a pressure input and an output (Figure 1) to receive a pressure transducer (60), a valve (18,26,30 and 32) attached to a fitting near an input, such that a fitting having a variable pressure chamber with a first and second selectable internal volumes (50 and 52) between a valve and an output (Figure 1) and a piston provided in a fitting, wherein a piston (54) is

remotely movable between first and second positions for selecting a first internal volume at a first position and a second internal volume at a second position volumes.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3,4,6 and 7 are rejected under 35 U.S.C.103 (a) as being unpatentable over Welker (U.S. 5,578,770) in view of Geiger (U.S. Patent 4,730,789).

Welker teaches the invention except for a piston that moves in response to an electro magnet and a valve that can be opened/closed remotely. Geiger discloses a piston that moves in response to an electro magnet and the valve that can be opened/closed remotely (Column 17, Lines 36-68).

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to further modify the invention taught by Welker to include a piston and an electro magnet as taught by Geiger, since Geiger teaches using a electromagnet for moving the piston a predetermined displacement.

3. Claims 8-10 are rejected under 35 U.S.C.103 (a) as being unpatentable over Welker (U.S. 5,578,770) in view of Kluth (U.S. Patent 5,582,064).

Welker teaches the invention except for a secondary tube attached to a primary tube between a first and second end, wherein a secondary tube contains a piston, and a

secondary tube that is attached generally perpendicular to a primary tube. Kluth discloses a secondary tube (25) attached to the primary tube (1) between the first and second ends (Figure 6), wherein the secondary tube contains the piston (24), and the secondary tube is attached generally perpendicular to the primary tube (Figure 6).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to further modify the device of Welker to include a secondary tube attached generally perpendicular to a primary tube as taught by Kluth, since Kluth teaches measuring several pressures with different characteristics that are adjacent to each other.

***Allowable Subject Matter***

4. Claims 11-15 and 19-21 are allowed.

***Response to Arguments***

5. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.
